Kiryl Pashkouski ds042219_mod1_proj1

Presentation_1

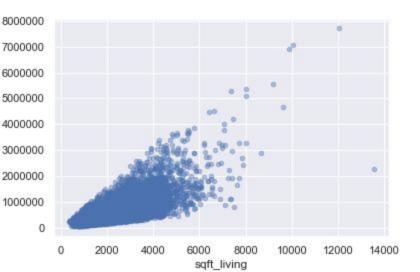

1. Objectives:

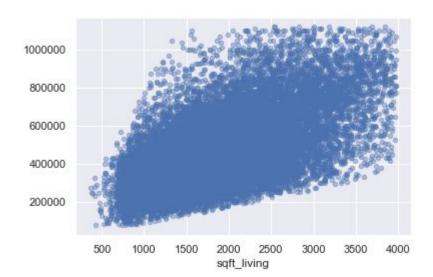

2. Quick characteristics about data set:

- 1. 20 features
- 2. Over 21k entries

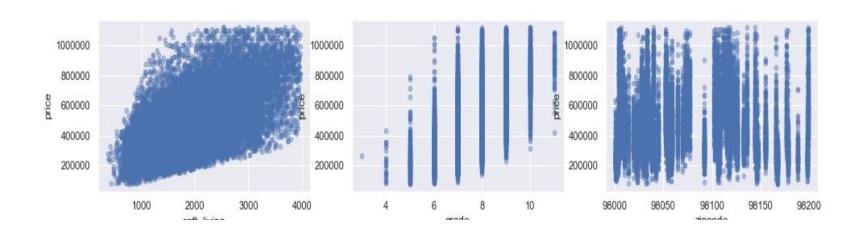

Step 3: Data Cleaning Process

- 1. Kept duplicates;
- Removed such features as 'waterfront', 'view', 'yr_renovated', 'id', 'lat', 'long', 'date'
- 3. Outliers

4. Categorical variables

5. Multivariable Linear Regression

Run Multivariable Linear Regression:

Variables: footage of a house; what grade it has; where it located: in city or out

[85]:	OLS Regression Results								
	Dep. Variable:	price	R-squared:	0.493					
	Model:	OLS	Adj. R-squared:	0.492)				
	Method:	Least Squares	F-statistic:	1952.	1				
	Date:	Wed, 08 May 2019	Prob (F-statistic):	0.00					
	Time:	10:52:06	Log-Likelihood:	-2.6759e+05					
	No. Observations:	20120	AIC:	5.352e+05					
	Df Residuals:	20109	BIC:	5.353e+05					
	Df Model:	10							
	Covariance Type:	nonrobust

6. Final Model

X3 - footage of the home, sq feet

```
OUR FINAL MODEL:
Y HAT = INTERCEPT +
       (GR_3, GR_4, GR_5, GR_6, GR_7, GR_8, GR_9, GR_10, GR_11)X1 +
      (CITY_0 + CITY_1)X2 +
       SQFT LIVING*X3
Y HAT = 182900 +
       ((0), (-118400), (-128200), (-121900), (-59970), (0), (127600), (207200), (276300))**X1 +
       ((41730), (141200))*X2+
       112.04*X3
where:
X1 - what grade is given to a house;
X2 - whether a house is located in city limits or not;
```

6a Example

If YOU're going to sell a house which is:

1100 sq.ft, located outside the city, and graded as "9", so predicted price =:

182900 + 127600 + 41730 + 112.04*1100 =

475474\$

7. Model validation

80/20 train/test split

Train Root Mean Squared Error,\$: 144427.0

Test Root Mean Squared Error, \$: 144781.0

Ratio testMSE/trainMSE, %: 100.25

There is no difference between train and test sets
